

# Enhancing TechCorp's Cybersecurity with Custom IAM Solutions

## IAM Solution Designs

### User Lifecycle Management

**Objective:** To streamline user onboarding, access modification, and offboarding processes.

**Solution:** Implement an automated user provisioning system integrated with TechCorp's HR database. This system will ensure that user access permissions are updated in real-time based on employment status changes. Additionally, a self-service portal will allow employees to request access changes with manager approval workflows.

**Technology:** Utilise identity management software like SailPoint to automate user provisioning and de-provisioning. Integrate this software with HR systems using API connectors.

### Access Control Mechanisms

**Objective:** To strengthen access controls and reduce the risk of unauthorised access.

**Solution:** Implement a role-based access control (RBAC) system. Define roles based on job responsibilities and grant permissions accordingly. Conduct regular access reviews and certifications to ensure alignment with roles.

**Technology:** Implement a leading RBAC solution such as Oracle Identity Manager. Configure the system to assign permissions based on user roles and integrate it with TechCorp's Active Directory.

### Alignment with Business Processes

Our solutions are designed to seamlessly integrate with TechCorp's existing business processes. For user lifecycle management, the integration with the HR database ensures that access rights are always aligned with employment status. The self-service portal streamlines access change requests, reducing administrative overhead.

Regarding access control mechanisms, our RBAC system aligns perfectly with TechCorp's organisational structure and job roles. Regular access reviews ensure that access permissions are continually aligned with evolving job responsibilities.

### Alignment with Business Objectives

These solutions contribute significantly to TechCorp's business objectives. By streamlining user lifecycle management, we enhance operational efficiency, reducing delays in granting access to new employees and minimising the risk of unauthorised access.

Strengthening access controls aligns with TechCorp's security and compliance objectives. It reduces the risk of data breaches and ensures that access permissions adhere to security policies.

### Rationale

Our choice of SailPoint for user lifecycle management is based on its robust automation capabilities and seamless integration with HR systems. Oracle Identity Manager is a recognised leader in RBAC solutions, offering scalability and customisation options to match TechCorp's needs.

In summary, our proposed IAM solutions align closely with TechCorp's business processes and objectives, enhancing security, operational efficiency, and user experience.
